The Transformation Story

Before Voltage (March 2024 through May 2025)

Prior to Voltage's engagement, Bella Luna's Meta Ads account was running 70+ fragmented campaigns with inconsistent structure and no unified strategy. While the product resonated with audiences (ROAS occasionally spiked above 15x), performance was volatile. The account hit its lowest point in September-October 2024 at 6-8x ROAS with CPAs above $20. Monthly revenue averaged $28,895 with no clear scaling path.

After Voltage (June 2025 through Present)

Voltage implemented a three-phase transformation. First, the account was consolidated from 70+ campaigns down to a clean two-campaign structure (one CBO for always-on prospecting, one ABO for seasonal pushes). Second, a momentum-based scaling strategy was deployed with gradient budget adjustments tied to ROAS performance. Third, disciplined creative rotation with UGC-style content replaced ad hoc creative decisions.

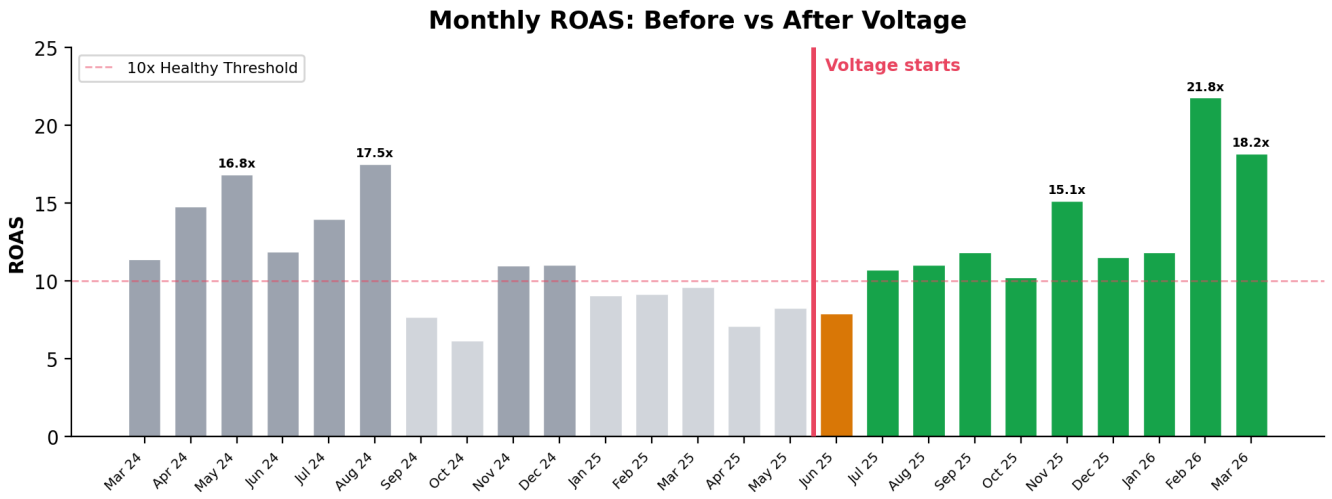
The results speak for themselves. Average monthly revenue increased from $28,895 to $76,920 while blended ROAS improved from 10.6x to 15.2x. February 2026 produced the best single month in account history: $218,815 in revenue at 21.76x ROAS on just $10,055 in spend.

Current State: March 2026 (18 Days)

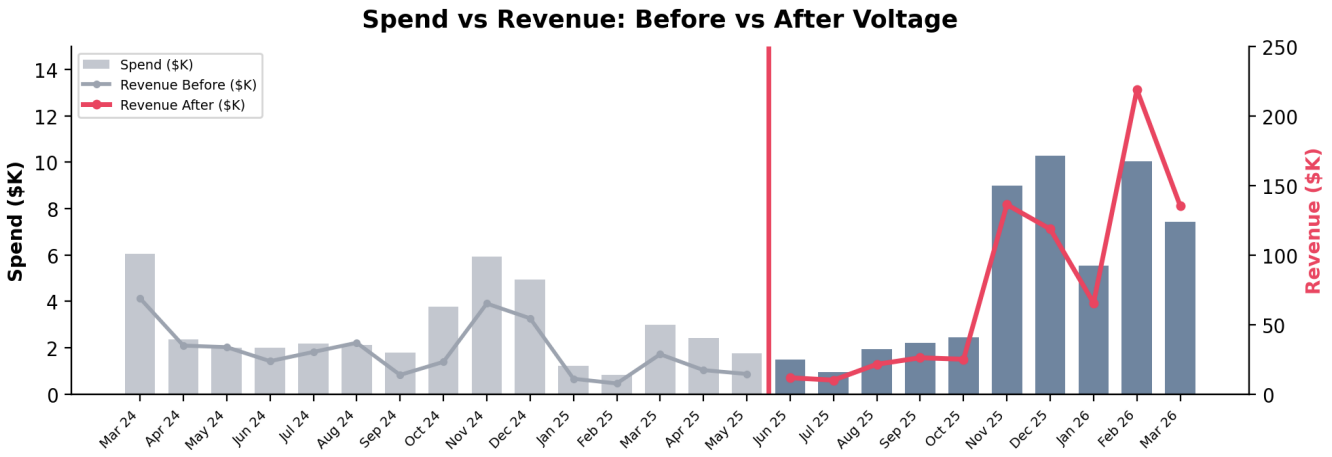
18.18x ROAS | $135,316 Revenue | 891 Purchases | $8.35 CPA | $7,442 Spend

Q1 2026 has already generated more revenue ($419,699) than all of 2025 ($310,774)

Performance Analysis

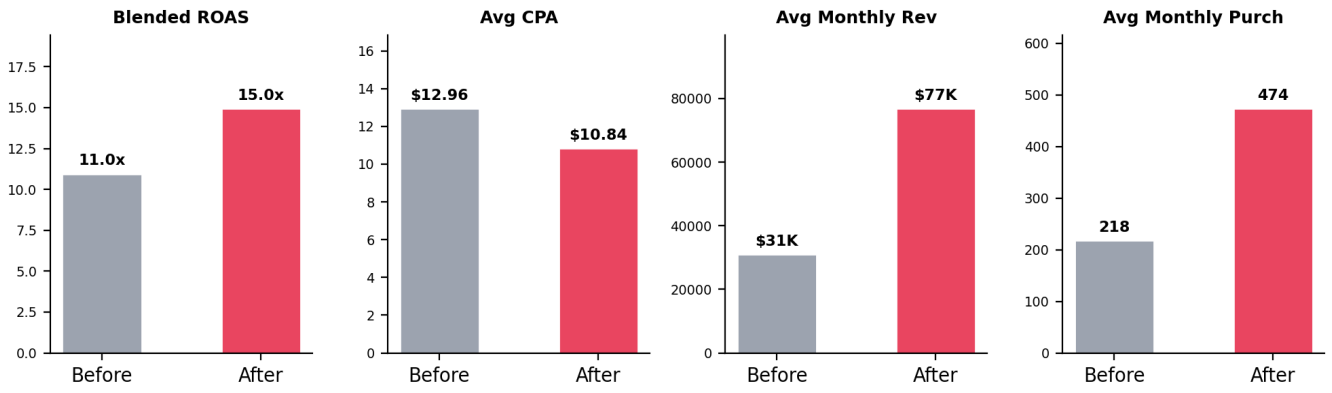


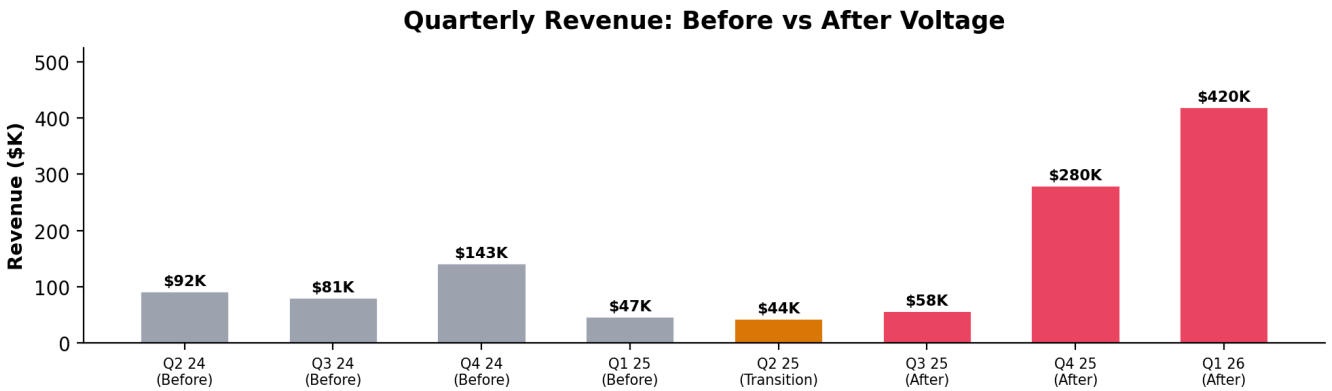
Gray bars represent performance before Voltage's engagement. Colored bars show performance under Voltage management. The red vertical line marks the transition point (June 2025). Note the elimination of sub-10x months and the dramatic upward trajectory in Q4 2025 through Q1 2026.



Under Voltage management, the relationship between spend and revenue has fundamentally improved. The account now converts modest spend increases into outsized revenue gains. February 2026's $10K in spend generated $219K in revenue, a return that would have been unthinkable under the prior fragmented campaign structure.

Before vs After: Key Metrics





The quarterly revenue trajectory demonstrates consistent acceleration under Voltage management. Q4 2025 ($279,985) was the first quarter to break the $100K barrier. Q1 2026 ($419,699 through March 18) has already shattered that record and is on pace to exceed $500K.

What Voltage Changed

Area	Before	After	Why It Matters
Campaign Structure	70+ fragmented campaigns	**2 campaigns (CBO + seasonal ABO)**	Consolidated learning data fed the algorithm faster
Scaling Strategy	Ad hoc budget adjustments	**Gradient scaling (5-20% based on ROAS)**	Eliminated CPA spikes from over-scaling
Creative Approach	Inconsistent rotation	**UGC-first with data-driven rotation triggers**	Creative refresh at frequency 3x or CTR drop 30%+
Decision Framework	Reactive	**Rubric-based with 3-tier classification**	Every ad set scored against benchmarks daily

Strategic Recommendations

1. Maintain current momentum. At 18x+ ROAS, the strategy is working. No changes to spend posture recommended.

2. Prioritize creative refresh. Frequency approaching 3.0x cap. UGC-style content has consistently outperformed. New creative assets should be in pipeline.

3. Monitor CPC/CTR convergence. CPC rising ($0.44 to $0.65) and CTR declining (3.89% to 1.91%) are leading indicators. Not impacting ROAS yet but require attention.

4. Prepare for Q2 seasonality. Historical data shows mid-year softness. The consolidated structure should handle the seasonal dip better than the fragmented structure did in 2024.

5. Explore video creative. AI-rendered video ads represent the next creative frontier for scaling without production bottlenecks.
